

Who needs a 24x7 Safety Shield[®] Business Camera System?

24x7 Safety Shield[®] system cameras can be used by all types of small businesses including restaurants, retail stores, auto care centers, barber/beauty shops, health clubs, and day-care centers. These cameras can also be used in non-commercial environments such as churches, government offices, and educational institutions. Surveillance videos captured by these cameras are stored on the DVR's internal hard drives and can be periodically archived to DVD, Blu-Ray, or other video storage media. Videos captured from each camera include camera name, event that triggered video capture (e.g., motion detected), and a time-stamped that facilitates a chronological review of any incident that may have occurred in the surveillance area.

Optional Surveillance Camera Monitoring Services (SCMS)

In addition to providing local/on-site monitoring capabilities, your new 24x7 Safety Shield[®] system can be remotely monitored by a reliable surveillance monitoring service provider during off-hours, weekends, and holidays. In the event of an emergency situation, your staff and/or the appropriate first-responders will be immediately notified. All still images and/or videos related to the incident, will be stored in a secure video archive and will be available to you and your staff at any time.

Surveillance Camera Monitoring Service (SCMS)

The 24x7 Safety Shield[®] system enables your company to:

- Improve safety for employees, customers, and vendors, in all interior and exterior areas including parking lots.
- Provide an effective deterrent against all types of property crimes including robberies, burglaries, vandalism, shoplifting, and employee thefts.
- Schedule recordings at specific times of the day, e.g., EOD closings, shift changes, ...
- Use existing business network without additional costly hardware upgrades.
- Monitor and control your cameras with:
 - ◇ the DVR included with your surveillance camera system, or ;
 - ◇ any local computer attached to your business network.
- Additionally, you can monitor your 24x7 Safety Shield[®] system from remote locations using an Internet-attached PC, MAC, iPad or tablet. You can also monitor and control individual cameras using an iPhone or other smartphone.
- Easily add more surveillance cameras to system or move existing cameras to new locations.

Key Components of 24x7 Safety Shield® Surveillance Camera systems

A typical safety shield camera system includes:

1. From four to thirty-two CCTV and wireless IP cameras. (These cameras are full-color, high-resolution, and support features such as PTZ, night-vision, two-way audio, and motion detection.)
2. Imbedded web server that can be easily connect your surveillance camera system to your existing business network.
3. Wireless IP cameras with a range of up to 300 feet. These cameras can be integrated into your existing Wi-Fi security framework.
4. Pre-configured surveillance control/monitoring DVR includes up to two-terabytes of local storage and can archive video files to LAN-attached servers and/or NAS devices..
5. Surveillance control/monitoring software that can support up to 32 wired and wireless cameras.
6. Integrated, end-to-end access security that ensures that the surveillance videos captured by your cameras are only accessible by approved members of your company's security staff.

All components of surveillance camera system are assembled, configured to meet your company's business and technology requirements.

Installation & Technical Support

We will ensure that your new camera system includes all required installation hardware such as all-weather camera enclosures, additional coax cable, and tamper-proof mounting brackets. Your new camera system will also include a CD with easy-to-follow, step-by-step installation instructions. (Cameras can easily be installed by your support staff, or we can provide professional installation for an additional fee.)

After your surveillance camera system is installed, we will:

- Configure the DVR and ensure that it support all CCTV and IP wireless cameras.
- Install and configure the embedded web server and ensure that the surveillance camera system can be controlled and monitored by PCs and MACs attached to your local business network.
- Attach your camera system to the Internet and ensure that it can be controlled and monitored by remote PCs, MACs, tablets, and iPads attached to the Internet.

After your 24x7 Safety Shield Camera System is installed and configured, we will provide the required training to your staff and security personnel to ensure that they can control and monitor the system from the DVR, local computers, and Internet-connected devices such as PCs, MACs, and other devices. We will also provide technical support for all hardware, software, and networking components of your new system for one year at no additional cost.
